

Project Development Phase Food Ordering Behaviour and Consumer Trends

Food Ordering Behaviour and Consumer Trends Project Development Phase

Dashboard Development

The dashboard was designed in Tableau to provide an interactive overview of food ordering behaviour. Filters, charts and KPIs were arranged to help users compare order trends across cities, cuisines, meal times and companies.

Dashboard Components

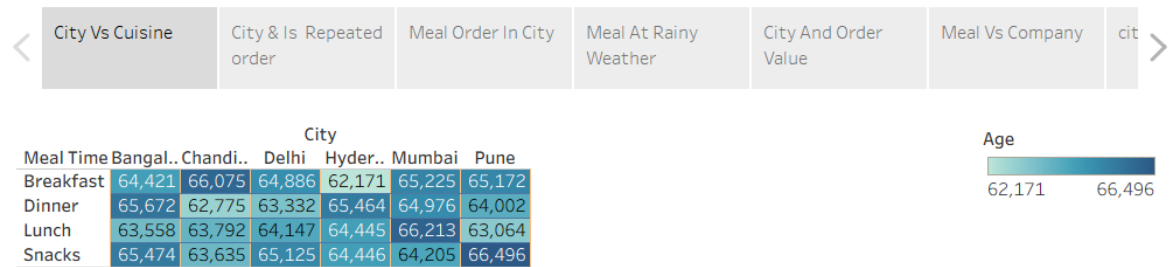

City & Total Orders compares orders by meal time and city. City vs Cuisine analyses cuisine preferences. Meal Time vs City shows ordering distribution. Meal Type vs Rainy Weather studies weather impact. City vs Total Orders summarizes contribution by city. Meal Type vs Company compares dining company preferences. City Order by Volume and Revenue Contribution by Meal Type summarize business performance.

Story Development

The Tableau story was developed using seven scenes. Each scene focuses on a business question and guides the user through customer ordering patterns using interactive visualizations.

Scene 1: City vs Cuisine - Heat map showing meal orders across cities and meal times.

Story 1

Description: This visualization helps analyze customer ordering patterns and supports business decisions by identifying demand trends and customer preferences.

Scene 2: City & Repeated Order - Bar chart comparing repeat orders by cuisine and city.

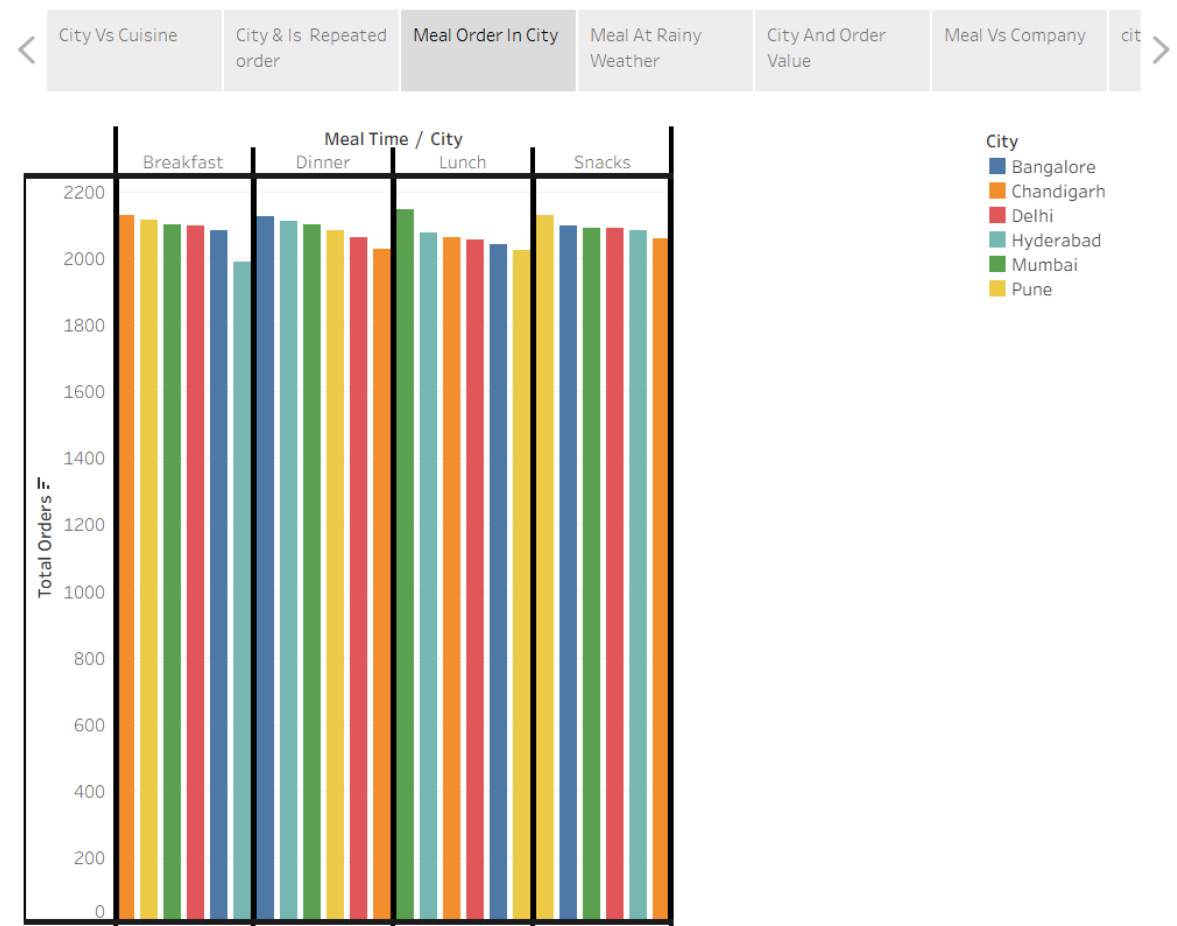

Story 1

Description: This visualization helps analyze customer ordering patterns and supports business decisions by identifying demand trends and customer preferences.

Scene 3: Meal Order in City - Bar chart showing meal-time demand across cities.

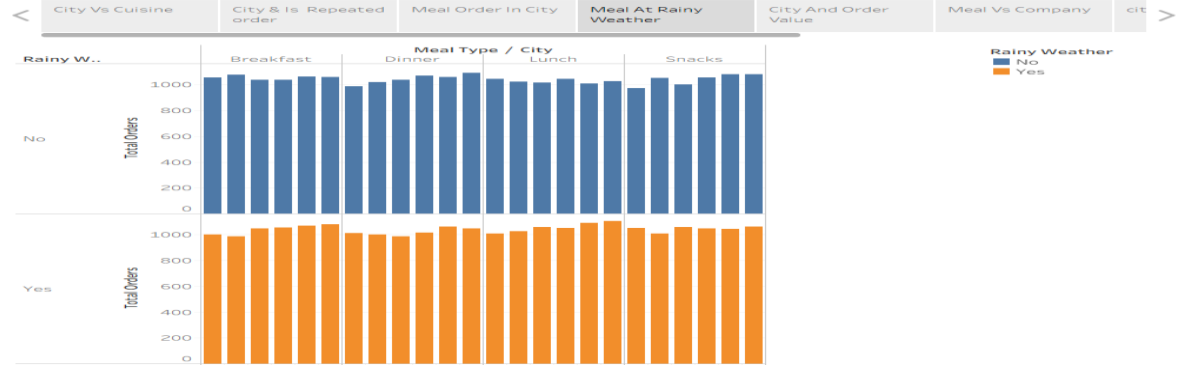

Story 1

Description: This visualization helps analyze customer ordering patterns and supports business decisions by identifying demand trends and customer preferences.

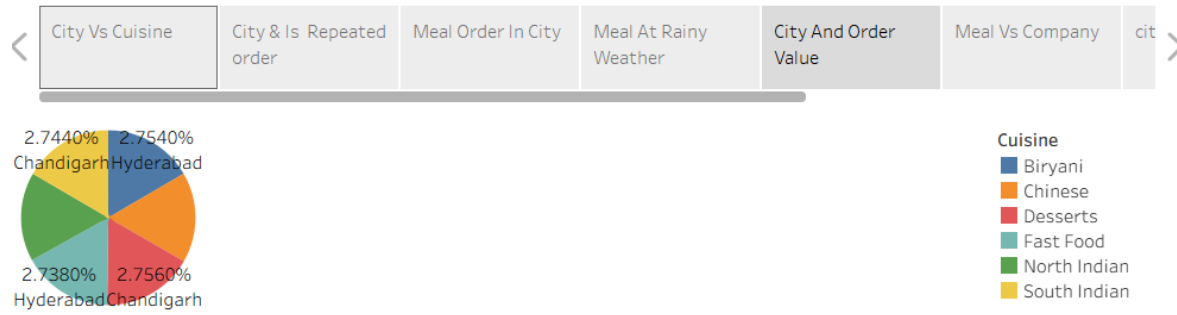

Scene 4: Meal at Rainy Weather - Bar chart comparing meal orders in rainy/non-rainy weather.

Story 1

Description: This visualization helps analyze customer ordering patterns and supports business decisions by identifying demand trends and customer preferences.

Scene 5: City and Order Value - Pie chart showing city-wise order value contribution.

Description: This visualization helps analyze customer ordering patterns and supports business decisions by identifying demand trends and customer preferences.

Scene 6: Meal vs Company - Bar chart comparing orders by meal type and dining company.

Description: This visualization helps analyze customer ordering patterns and supports business decisions by identifying demand trends and customer preferences.

Scene 7: City Order - Bar chart comparing total order value across cities.

Description: This visualization helps analyze customer ordering patterns and supports business decisions by identifying demand trends and customer preferences.
